DIGITAL LITERACY PROJECT REPORT

SUBMITTED BY: PRANAV PURWAR
REGISTRATION NUMBER: 25BCE11086

COURSE: B.Tech CSE (CORE)

Course Code: CSE0001

INTRODUCTION

This project was assigned as part of the Digital Literacy course to help students understand the importance of using digital tools effectively and responsibly. As a Student Digital Ambassador, the goal was to create awareness among peers about digital platforms, communication, and online safety.

Through this project, I explored various tools such as Canva, GitHub, and Google Forms, and also learned how to maintain a professional online presence. Each task focused on a different aspect of digital literacy, including creating visual content, building a digital portfolio, understanding online platforms, practicing email etiquette, and learning about cybercrime.

Overall, this project helped me gain practical knowledge and improve my digital skills, which will be useful throughout my academic and professional journey.

TASK 1: DIGITAL LITERACY

INFOGRAPHIC

For this task, I created and updated my profiles on GitHub, LinkedIn, and Stack Overflow. I chose these platforms because they are useful for students who want to build their skills and create a professional presence online.

GitHub helps in storing projects and managing projects, which will be useful to showcase my work in the future and to build experience through it.

LinkedIn is helpful for building a professional profile and connecting with other students and professionals and to post my achievements and learnings it will help me to keep myself updated with the technological world.

Stack Overflow is a platform where people ask and answer coding questions, which is very useful when facing problems while learning programming.

In the coming years, I plan to regularly upload my projects on github and improve my coding skills. I will keep my linkedin profile updated and try to connect with more people from my field. I also want to use stack overflow to learn from others and eventually help others once I gain more knowledge. These platforms will definitely support my learning and career growth.

TASK 2:- BUILD YOUR STUDENT **DIGITAL PORTFOLIO**

In Task 2, I created my student digital portfolio by setting up profiles on GitHub, sharing and managing projects, LinkedIn is used for professional networking, and On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my educational information and created a simple in data science.

This task helped me understand the importance of maintaining a professional online LinkedIn, and Stack Overflow. Each platform serves a different purpose. GitHub is used for Stack Overflow is useful for learning and practicing data-related skills. professional profile. On Stack Overflow, I set up my account to explore learning opportunities presence from an early stage. This will help me build a strong digital identity and improve my career opportunities.

TASK 3: CODING & COLLABORATION

PLATFORMS

In this task, I explored different online platforms that help in learning and collaboration. I used Hacker rank to solve a basic coding problem, which helped me understand how coding questions are structured and how to approach them. It was a good starting point for improving my problem-solving skills and to implement the programming language techniques to solve complex problems.

I also created a google form of digital literacy with questions related to digital literacy. This form can be used to test the knowledge of students in a simple way to check their learning regarding digital literacy. I also checked the responses using Google Sheets, which showed me how data can be collected and analysed easily.

This task helped me understand how digital tools can be used not only for learning but also for interacting and sharing information with others. These skills will be very useful in my academic journey and I can also take inspiration from others project and understand different types of approaches to problems.

TASK 4: EMAIL ETIQUETTE & SOCIAL MEDIA GUIDELINES

In Task 4, I learned about professional communication through email writing and social media usage. I wrote two formal emails—one requesting an assignment extension and another expressing interest in an internship opportunity. This helped me understand the importance of proper structure, polite tone, and clarity in communication.

A situation where poor communication can cause problems is when a student sends an email without a subject or uses informal language. This can create a negative impression. Using proper email etiquette can help avoid such issues and ensure effective communication.

TASK5: CYBERCRIME AWARENESS

For this task, I studied phishing and pharming as a type of cybercrime. Phishing is a type of cyberattack in which an attacker pretends to be a trustworthy source, such as a bank or a known website, to trick people into sharing sensitive information like passwords, otp, or credit card details. Phishing involves tricking users into sharing sensitive information such as passwords or bank details through fake emails or websites. I learned that such attacks are very common and can lead to serious consequences like financial loss or identity theft.

Pharming is a cyberattack where a user is redirected from a legitimate website to a fake one without their knowledge, even when they enter the correct web address.

While researching about cybercrime, what really surprised me how easily people can be tricked by simple methods like phishing. I used to think scams required advanced hacking skills, but I realized that many of them actually rely on small human mistakes like trusting a random link or message without thinking twice. It was honestly surprising to see how real fake emails and websites can look, almost identical to the original ones.

Because of this, I've decided to be much more careful online. Earlier, I didn't always pay attention to links or where they were coming from, but now I'll make sure to double-check before clicking anything or sharing personal information. This task made me realize that being aware and alert is one of the most important things when it comes to staying safe in the digital world.

CONCLUSION

This project helped me gain a clear understanding of digital literacy and its importance in the modern developing world.

It made me work on various task of digital world which helped me to develop methods and skills about the various projects and concepts.

It helped me to build a professional online portfolio, a space where I can discuss about the topics regarding my tech skills and learn from the digital environment and communicate properly in a digital environment.

I also became more aware of online risks of cyberattacks like phishing pharming and how to stay safe. Overall, this project improved my technical, communication, and awareness skills, which will be useful throughout my academic journey and future career.
